

## Corrections

*Basic Current Procedural Terminology/HCPCS Coding, 2017*

AHIMA Product # AC200617

### **Page 317, Case Study 58**

Answer should read: 62323

### **Page 23, Case Study 8**

There is a note in CPT that states code 31576 cannot be reported with 31578. There is controversy concerning the use of a modifier with this example. This question will be removed from the textbook in 2018.

### **Page 233, Exercise 8.1, Question 3**

The correct codes are 90471 for administration and 90658 for typhoid.

### **Page 302, Case Study 37**

The correct answer is 62322 for injection

### **Page 314, Case Study 54**

12031 Intermediate repair 2.5 cm or less

### **Page 317, Case Study 58**

The correct answer is 62323. The CPT Note before this section states that “the placement and use of a catheter to administer one or more epidural or subarachnoid injections on a single calendar day should be reported in the same manner as if a needle had been used.” CPT further explains that threading a catheter and removing the catheter should be treated as a single injection.
